

HT12A/HT12E 2¹² Series of Encoders

Note that the HT12A device, although mentioned in this datasheet, has already been phased out and is presently no longer available.

Features

- Operating voltage
 - 2.4V~5V for the HT12A
 - 2.4V~12V for the HT12E
- Low power and high noise immunity CMOS technology
- Low standby current: 0.1μA (typ.) at V_{DD}=5V
- HT12A with a 38kHz carrier for infrared transmission medium
- · Minimum transmission word
 - Four words for the HT12F
 - One word for the HT12A
- · Built-in oscillator needs only 5% resistor
- · Data code has positive polarity
- · Minimal external components
- Pair with Holtek's 2¹² series of decoders
- 20-pin SOP package

Applications

- · Burglar alarm system
- · Smoke and fire alarm system
- · Garage door controllers
- · Car door controllers

- · Car alarm system
- · Security system
- Cordless telephones
- · Other remote control systems

General Description

The 2¹² encoders are a series of CMOS LSIs for remote control system applications. They are capable of encoding information which consists of N address bits and 12–N data bits. Each address/data input can be set to one of the two logic states. The programmed addresses/data are transmitted together with the header

bits via an RF or an infrared transmission medium upon receipt of a trigger signal. The capability to select a $\overline{\text{TE}}$ trigger on the HT12E or a DATA trigger on the HT12A further enhances the application flexibility of the 2^{12} series of encoders. The HT12A additionally provides a 38kHz carrier for infrared systems.

Selection Table

| Function Part No. | Address No. | Address/ Data No. | Data No. | Oscillator | Trigger | Carrier Output | Negative Polarity | Package |
|-------------------|----------------|----------------------|----------|---------------------|---------|-------------------|----------------------|--------------|
| HT12A | 8 | 0 | 4 | 455kHz resonator | D8~D11 | 38kHz | No | 18DIP, 20SOP |
| HT12E | 8 | 4 | 0 | RC oscillator | TE | No | No | 20SOP |

Note: Address/Data represents pins that can be either address or data according to the application requirement.

Note: The address data pins are available in various combinations (refer to the address/data table).

Pin Assignment

Pin Description

| Pin Name | I/O | Internal Connection | Description |
|----------|-----|---|---|
| A0~A7 | I | CMOS IN Pull-high (HT12A) | Input pins for address A0~A7 setting These pins can be externally set to VSS or left open |
| | | | |
| | | NMOS TRANSMISSION GATE PROTECTION DIODE (HT12E) | |
| AD8~AD11 | I | NMOS TRANSMISSION GATE PROTECTION DIODE (HT12E) | Input pins for address/data AD8~AD11 setting These pins can be externally set to VSS or left open |
| D8~D11 | ı | CMOS IN Pull-high | Input pins for data D8~D11 setting and transmission enable, active low These pins should be externally set to VSS or left open (see Note) |
| DOUT | 0 | CMOS OUT | Encoder data serial transmission output |
| L/M | I | CMOS IN Pull-high | Latch/Momentary transmission format selection pin: Latch: Floating or VDD Momentary: VSS |
| TE | I | CMOS IN Pull-high | Transmission enable, active low (see Note) |
| OSC1 | I | OSCILLATOR 1 | Oscillator input pin |
| OSC2 | 0 | OSCILLATOR 1 | Oscillator output pin |
| X1 | I | OSCILLATOR 2 | 455kHz resonator oscillator input |
| X2 | 0 | OSCILLATOR 2 | 455kHz resonator oscillator output |
| VSS | 1 | | Negative power supply, ground |
| VDD | 1 | _ | Positive power supply |

Note: D8~D11 are all data input and transmission enable pins of the HT12A.

TE is a transmission enable pin of the HT12E.

Approximate Internal Connections

Absolute Maximum Ratings

| Supply Voltage (HT12A)V _{SS} -0.3V to V _{SS} +5.5V | Supply Voltage (HT12E)0.3V to 13V |
|--|-----------------------------------|
| Input VoltageV _{SS} =0.3 to V_{DD} +0.3V | Storage Temperature50°C to 125°C |
| Operating Temperature–20°C to 75°C | |

Note: These are stress ratings only. Stresses exceeding the range specified under "Absolute Maximum Ratings" may cause substantial damage to the device. Functional operation of this device at other conditions beyond those listed in the specification is not implied and prolonged exposure to extreme conditions may affect device reliability.

Functional Description

Operation

The 2^{12} series of encoders begin a 4-word transmission cycle upon receipt of a transmission enable ($\overline{\text{TE}}$ for the HT12E or D8~D11 for the HT12A, active low). This cycle will repeat itself as long as the transmission enable ($\overline{\text{TE}}$ or D8~D11) is held low. Once the transmission enable returns high the encoder output completes its final cycle and then stops as shown below.

Transmission timing for the HT12E

Transmission timing for the HT12A (L/M=Floating or VDD)

Transmission timing for the HT12A (L/M=VSS)

Information Word

If $L/\overline{M}=1$ the device is in the latch mode (for use with the latch type of data decoders). When the transmission enable is removed during a transmission, the DOUT pin outputs a complete word and then stops. On the other hand, if $L/\overline{M}=0$ the device is in the momentary mode (for use with the momentary type of data decoders). When the transmission enable is removed during a transmission, the DOUT outputs a complete word and then adds 7 words all with the "1" data code.

An information word consists of 4 periods as illustrated below.

Rev. 1.30 5 October 4, 2021

Address/Data Waveform

Each programmable address/data pin can be externally set to one of the following two logic states as shown below.

Address/Data bit waveform for the HT12E

Address/Data bit waveform for the HT12A

The address/data bits of the HT12A are transmitted with a 38kHz carrier for infrared remote controller flexibility.

Address/Data Programming (Preset)

The status of each address/data pin can be individually pre-set to logic "high" or "low". If a transmission-enable signal is applied, the encoder scans and transmits the status of the 12 bits of address/data serially in the order A0 to AD11 for the HT12E encoder and A0 to D11 for the HT12A encoder.

During information transmission these bits are transmitted with a preceding synchronization bit. If the trigger signal is not applied, the chip enters the standby mode and consumes a reduced current of less than $1\mu A$ for a supply voltage of 5V.

Usual applications preset the address pins with individual security codes using DIP switches or PCB wiring, while the data is selected by push buttons or electronic switches.

The following figure shows an application using the HT12E:

Rev. 1.30 6 October 4, 2021

The transmitted information is as shown:

| Pilot | A0 | A1 | A2 | A3 | A4 | A5 | A6 | A7 | AD8 | AD9 | AD10 | AD11 |
|------------|----|----|----|----|----|----|----|----|-----|-----|------|------|
| & Sync. | 1 | 0 | 1 | 0 | 0 | 0 | 1 | 1 | 1 | 1 | 1 | 0 |

Address/Data Sequence

The following provides the address/data sequence table for various models of the 2¹² series of encoders.

| Dowf No. | | | | | Δ | \ddress/ | Data Bit | s | | | | |
|----------|----|----|----|----|----|----------|----------|----|-----|-----|------|------|
| Part No. | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 |
| HT12A | A0 | A1 | A2 | A3 | A4 | A5 | A6 | A7 | D8 | D9 | D10 | D11 |
| HT12E | A0 | A1 | A2 | A3 | A4 | A5 | A6 | A7 | AD8 | AD9 | AD10 | AD11 |

Transmission Enable

For the HT12E encoders, transmission is enabled by applying a low signal to the $\overline{\text{TE}}$ pin. For the HT12A encoders, transmission is enabled by applying a low signal to one of the data pins D8~D11.

Two Erroneous HT12E Application Circuits

The HT12E must follow closely the application circuits provided by Holtek (see the "Application circuits").

• Error: AD8~AD11 pins input voltage > V_{DD}+0.3V

• Error: The IC's power source is activated by pins AD8~AD11

Rev. 1.30 7 October 4, 2021

Flowchart

• HT12A

• HT12E

Note: D8~D11 are transmission enables of the HT12A. $\overline{\text{TE}}$ is the transmission enable of the HT12E.

Oscillator Frequency vs. Supply Voltage

The recommended oscillator frequency is f_{OSCD} (decoder) $\cong 50 \; f_{OSCE}$ (HT12E encoder) $\cong \frac{1}{3} \, f_{OSCE}$ (HT12A encoder)
